

Smart solar EV charging using your existing grid capacity.

Solar + battery + mains.

12 charge points. Installed in 1 day.

Certified

Corporation

Deploying EV charging should be straightforward. But for some organisations, **it remains a challenge.**

Infrastructure can't
scale fast enough.

Grid upgrades can delay
projects for months, or years.

Installation
costs spiral.

Meet HALO FastHub

FastHub is powered by HALO, an operating system, designed and developed by 3ti.

It turns any site into its own smart micro grid, maximising capacity, cutting costs and delivering real-time energy control — without expensive grid upgrades.

Why HALO FastHub?

Deploy 12 charge points in 1 day

Accelerate your EV rollout

Minimal fuss,
maximum impact.

Reduce reliance on the grid

Managing your energy 24/7

HALO generates and stores energy on site,
reducing the power you need from the grid.

Support your sustainability goals

With integrated solar generation (19.32 kWp)

Reduced emissions compared to grid-only charging. Up to 64,000 EV miles powered by solar alone, every year.

Scalable across sites

A repeatable system

Once deployed, rolling out across multiple locations becomes faster and more predictable.

Lower energy costs

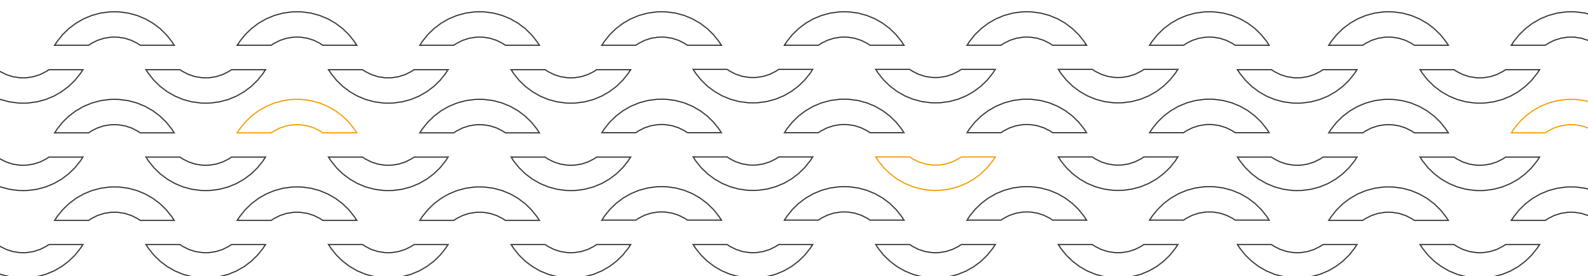

Make full use of every unit of energy

When not in use for charging, energy is redirected to your building, helping cut costs.

Generate new revenue streams

With flexible tariff control

Set your own charging tariffs and retain the revenue, or offer free or subsidised charging as a staff benefit.

Our one day installation

Site assessment

Share your site details

We review your grid connection, car park layout and charging requirements.

Rapid deployment

Installed in one day

We deliver, install and commission with minimal disruption.

Start charging

From day one

Set your tariffs while we manage ops, maintenance and 24/7 driver support.

Case study

Merseyside Police

The first UK police force to deploy HALO FastHub

Merseyside Police partnered with 3ti to deploy HALO FastHub in support of their transition to a fully-electrified fleet.

Faced with growing demand for EV charging, they needed a solution that could be deployed quickly, operate reliably and support a diverse range of vehicles — without disrupting their crucial operations.

- Improved operational resilience with on-site charging
- Supports the organisation's Net Zero 2040 commitments
- Flexible support for many different types of vehicle

“FastHub allows us to provide flexible charging for our diverse fleet, which is integral to our sustainability strategy.”

Keith Dickinson, Director of Resources

Case study

Segen

Renewables leader deploys HALO FastHub for staff and trainees

Segen partnered with 3ti to install HALO FastHub at its Training Academy in Kent — providing EV charging for staff and over 1,600 trainees each year.

They needed a solution that reflected their position as a leader in renewables, while delivering fast and practical deployment.

- 12 charge points installed in under six hours
- Additional digital displays promote Segen courses
- Fully integrated with existing operations
- Enhances on-site experience for staff and trainees
- Supports Segen's decarbonisation and net zero goals

“As a renewables leader, we're committed to reducing our carbon footprint. Onsite EV charging delivers a convenient, sustainable experience for everyone at the Academy.”

James Galloway, Global Product Director

Smart energy. Fully managed.

HALO FastHub is a fully integrated smart EV charging system combining solar generation, mains power, battery storage and EV charge points.

Rapid deployment.

Using existing grid capacity.

Remote monitoring and 24/7 support.

Designed for your environment

Fleets

Reliable, scalable charging to keep vehicles moving.

Workplaces

Fast deployment with potential to generate additional revenue.

Destinations

Attract EV driver and unlock new revenue opportunities.
